Theoretical Computer Science
Logic, semantics and theory of programming

Volume 224, Numbers 1–2, 6 August 1999

Logical Foundations of Computer Science

Guest Editor: S.I. Adian

Abstracted/Indexed in: ACM Computing Reviews, Compuscience, Computer Abstracts, Current Contents: Engineering, Technology & Applied Science, Engineering Index/Compendex, INSPEC Information Services, Mathematical Reviews, Zentralblatt für Mathematik

Contents

Preface

S.I. Adian 1

Contributions

M. Baaz
Note on the generalization of calculations 3

L.D. Beklemishev
Parameter free induction and provably total computable functions 13

B. Courcelle
The monadic second-order logic of graphs XI: Hierarchical decompositions of connected graphs 35

Y.L. Ershov
On *d*-Spaces 59

E. Grädel and M. Otto
On logics with two variables 73

P. de Groote
An algebraic correctness criterion for intuitionistic multiplicative proof-nets 115

B. Heinemann
Temporal aspects of the modal logic of subset spaces 135

J.-Y. Marion
From multiple sequent for additive linear logic to decision procedures for free lattices 157

A. Lisitsa and V. Sazonov
Linear ordering on graphs, anti-founded sets and polynomial time computability 173

V. Diekert, Y. Matiyasevich and A. Muscholl
Solving word equations modulo partial commutations 215

M. Otto
Bisimulation-invariant PTIME and higher-dimensional μ-calculus 237

G. Perrier
A PSPACE-complete fragment of second-order linear logic 267

G.S. Tseytin
A formalization of reasoning not derived from standard predicate logic 291

A. Voronkov
Simultaneous rigid *E*-unification and other decision problems related to the Herbrand theorem 319
